Pisgah Marsh

Species Checklist

Pisgah Marsh Pocket Guide

Pisgah Marsh Nongame Area

Pisgah Marsh Nongame Area provides excellent habitat for many different species. The 99-acre Pisgah Nongame Area is nestled on the Kosciusko, Noble and Whitley County lines in northeast Indiana. The Area is an ecologically sensitive, geologically significant and a biologically diverse area and is accessible only by the boardwalk.

The Pisgah Marsh Boardwalk and Golden Eagle Viewing Deck was constructed to allow visitors the opportunity to experience and understand the natural habitat and diversity of the marsh while protecting the habitat.

This checklist provides the common name of some species of amphibians, insects, mammals and reptiles that might be present at the Marsh. Keep in mind that you may not be able to actually see all of these species from the boardwalk.

Visiting Pisgah:

Please practice and promote ethical wildlife viewing and photography while visiting Pisgah Marsh. Please do not disturb wildlife that is resting, nesting or foraging. In addition, please do not litter or feed the wildlife. This is a “carry-in, carry-out” facility.

Pisgah Marsh Facilities:

The boardwalk is approximately .3 miles long and meets ADA standards. An ADA-accessible restroom facility is also available.

The Pisgah Marsh Nongame Area is managed by Tri-County Fish and Wildlife Area. Please report any illegal or damaging activities to this facility.

MAMMALS
